Installation Guide

## —— "Go Anywhere" Traveling Forum

## Zhao Xiaohan   17083755D

Step 1: Place **"goanywhere" folder** which includes all source codes under "htdocs" folder in XAMPP directory.

goanywhere

Step 2: Go to phpMyAdmin, create a new database called "**forumdb**". (**Please make sure there is no another database with the same name in your system!**)

Databases	SQL	Status	User accounts	Export	Import

Databases

Create database

forumdb	Collation	Create

Step 3: Click import, import the source file "**forumdb.sql**", keep all the other settings as default.

forumdb

Structure	SQL	Search	Query	Export	Import	Opera

Importing into the database "forumdb"

File to import:

File may be compressed (gzip, bzip2, zip) or uncompressed.
A compressed file's name must end in **.[format].[compression]**. Example: **.sql.zip**

Browse your computer: Choose File   forumdb.sql   (Max: 40MiB)

You may also drag and drop a file on any page.

Character set of the file: utf-8

Partial import:

☑

Allow the interruption of an import in case the script detects it is close to the PHP timeout limit. (*This m...
transactions.*)

Other options:

☑ Enable foreign key checks
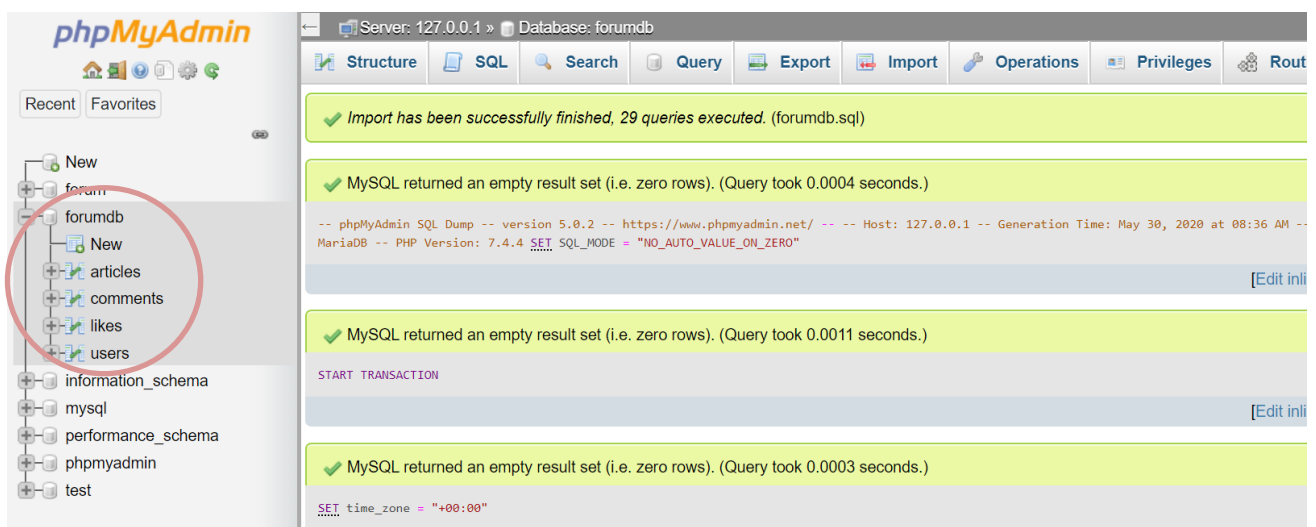

Format:

[SQL ⌄]

Format-specific options:

SQL compatibility mode: [NONE ⌄]

☑ Do not use AUTO_INCREMENT for zero values

Once the file is imported successfully, you will see the success message and the forumdb database with 4 tables will appear. Please **let me know** if you cannot import successfully! It should work well.

Step 4: Type **goanywhere/index.php** in local host and start to play around with it! You can refer to the user manual for easy navigation. Enjoy!
